Juo-Ying Pai

Goes by Pai

Senior Frontend Engineer | React · Next.js · TypeScript | Full-stack capable
Taipei, Taiwan (UTC+8) | Open to remote contract work across APAC
juoyingpai@gmail.com | linkedin.com/in/linda-pai | github.com/linda-pai | juoyingpai.vercel.app

Summary

Frontend engineer with 6 years of shipping production web products: 3 years in-house on high-traffic fintech and government platforms, 1 year founding and running my own marketplace from launch to paying customers, and 2+ years as a long-term contract engineer at a martech startup, delivering projects for brands such as Harry Winston, Tiffany & Co. and BVLGARI.

I bring in-house ownership to contract work: I take features from spec to production, communicate clearly in async environments, and stay reliably accountable as a remote teammate. Strongest in React, Next.js and TypeScript, with enough backend and cloud depth (Node.js, MongoDB, AWS, Docker) to deliver complete products end to end. Outside client work, I build AI-enabled products that help people, most recently LifeBook.

Technical Skills

Frontend: React, Next.js (SSR), TypeScript, JavaScript (ES6+), Redux Toolkit (RTK Query), React Router, Vite, HTML5, CSS3 & animation, SVG, Canvas, Tailwind CSS, styled-components, Ant Design, Material UI, D3.js
LINE Ecosystem: LIFF, LINE Login, Messaging API
Architecture: Micro-frontends, monorepos (Lerna, Nx), shared component libraries, OpenAPI-typed API layers, i18n (i18next, Crowdin; Thai / English / Chinese), SEO & web performance, Google Analytics (GA4)
Backend & Cloud: Node.js, REST APIs, MongoDB, Redis, OAuth/SSO (Google, LINE), JWT, payments (LINE Pay, NewebPay), AWS (EC2, S3, Rekognition, ELB, Route 53, Amplify), Firebase (Realtime Database, Auth, Hosting), Docker / Docker Compose, Jenkins
AI: LLM API integration (Google Gemini API)
Ways of Working: AI-assisted development (Claude Code), async-first remote collaboration, written specs & handoffs, code review

Experience

CatchOpz Jul 2024 – Present
Frontend Engineer (Long-term Contract, full-time hours) *Remote*

Taipei-based martech startup offering LINE-based CRM, e-commerce and online-to-offline (OMO) solutions for retail brands.

- Retained for 2+ years with steadily growing responsibility: started on one-off campaign pages, was brought onto the company's core platform, and now own the frontend of its flagship new products; 12+ projects delivered in React and Next.js
- **Invited by the CTO to join the company's team at the 2026 New Taipei City AI Smart City Hackathon (powered by AWS)** as a core technical contributor; ramped up from zero on land valuation and co-built an AI-assisted zone-based land valuation prototype for the city's Land Administration Department, leading the frontend on a 3-person team and deploying on AWS Amplify
- Sole frontend engineer for a multi-tenant online Ichiban Kuji-style prize-draw platform, launching both the customer-facing LINE LIFF storefront and the merchant admin in 2.5 months with AI-assisted development (Claude Code)
- Built the storefront in Next.js 16 (39 routes): LINE login, points top-up, a real-time draw lobby on Firebase Realtime Database with slot holding and queueing, a peel-to-reveal prize animation using peel.js and Canvas, and payment and ECPay store-picker flows inside LINE's in-app browser
- Architected the merchant admin in React 19, strict TypeScript and Ant Design: 20 lazy-loaded pages for prize series, orders, shipments, promotions and payment/logistics settings; both apps use typed RTK Query layers (190+ endpoints) generated from the backend's OpenAPI spec
- Refactored the e-commerce admin CMS frontend and introduced i18n into the company's core CMS to support multilingual client sites
- Built station POS screens for FunBike, New Taipei City's riverside bike-rental system run by a nonprofit foundation with the city government, as one of three frontend engineers
- Built an immersive campaign experience for PAÑPURI, a Thai luxury wellness brand, as a LINE mini-app — a six-step animated "climb" using CSS-driven camera transitions, scroll-snap, and 3D card flips, ending in a personalized, shareable result card

- Built agency-commissioned Thai/English LINE e-shops for Tiffany & Co. and BVLGARI in Thailand, and was the sole frontend engineer on Harry Winston's 3-stage interactive holiday campaign
- Built LINE LIFF campaigns for Goodyear (reviews, voting, live leaderboards) and Anlene (mobility self-assessment)
- Delivered without interruption while working remotely from multiple countries, using async updates and documented handoffs

PhotoPacer Jul 2023 – Jul 2024
Founder & Full-stack Engineer *Taipei, Taiwan*

Sports event photo marketplace where freelance photographers sell marathon photos directly to runners.

- Took the product from idea to paying customers as sole engineer, owning product planning, full-stack development, deployment and operations
- Covered 20 race events in 12 months and processed ∼400 paid orders (∼20 per event)
- Automated bib-number detection with AWS Rekognition, letting runners find their photos by bib number instead of scrolling through thousands of shots
- Built the photographer upload pipeline to S3 with automatic watermarking, protecting photographers' work until purchase
- Integrated two payment gateways (NewebPay, LINE Pay), Google and LINE login, and Nodemailer email; deployed on AWS (EC2, ELB, Route 53) with Docker Compose

Tech: Next.js, TypeScript, Node.js, MongoDB, AWS (S3, Rekognition, EC2, ELB, Route 53), Docker Compose, NewebPay, LINE Pay

JKOPay Co., Ltd. Sep 2021 – Jul 2023
Frontend Engineer *Taipei, Taiwan*

Taiwan's largest e-payment platform, with 6M+ users.

- Built and maintained frontend systems for high-traffic fintech products in a large-scale React/TypeScript monorepo (Lerna), with micro-frontends and a shared component library used across multiple product surfaces
- Developed a no-code campaign page builder that let the internal marketing team create and publish campaign pages without engineering support
- Built the voucher-claim pages for Taiwan's government Quintuple Stimulus Voucher campaign, a nationwide program run through JKOPay
- Developed the frontend of JKOPay's insurance platform and other payment and webview flows with product and design teams
- Built the official JKOPay website with Next.js SSR, optimized for SEO and performance, with i18next/Crowdin localization and GA4 tracking
- Built the frontend of a crypto custody product (not launched due to regulatory constraints); sponsored by the company to complete a Solidity smart-contract bootcamp

Tech: React, TypeScript, Next.js, Node.js, Lerna, Redis, AWS S3, Jenkins

Environmental Resources International Jul 2020 – Sep 2021
Frontend Engineer *Taipei, Taiwan*

- Architected and built from scratch the frontend of the Greenlife Information Platform for Taiwan's Ministry of Environment (then EPA), a public-facing government service
- Built interactive data visualizations and SVG interfaces with D3.js
- Implemented JWT authentication and a user reward/points system to drive engagement

Tech: React, D3.js, Webpack, Bootstrap, JWT

Side Project

LifeBook | *AI-powered Personal Knowledge System* | *Next.js, TypeScript, Gemini API* lifebooks-mu.vercel.app

- Designed and shipped solo: an AI "Auto Structure Generator" built on the Gemini API that analyzes a free-form life story and extracts key decisions, turning points and lessons learned
- Turned the AI output into structured knowledge cards, timelines and relationship maps for exploring life experiences

Certifications & Languages

Certification: AWS Certified Cloud Practitioner (Oct 2024)
Languages: Mandarin (native), English (professional working proficiency, CEFR B2)

Education

Tamkang University New Taipei City, Taiwan
Bachelor in Industrial Economics *2019*
